

Self Scan

Put power in your guest's hands and give a sleek, easy check-in experience with Self Scan!

Highlights:

- Reduce the requirements on staffing with a single staff member monitoring screens in place of multiple tearing tickets.
- Allow staff and moviegoers to maintain distance for health safety with ease.
- Provide moviegoers with greater autonomy and flexibility.
- Compatible with various Android devices, and able to scale responsively to the size of your chosen screen.

Reduce staff dependency

By setting up your cinema with Self Scan devices, you put the power in your moviegoers' hands to scan and validate their own tickets into the auditorium. It's as easy as flashing a printed ticket or the digital receipt on their phone.

With Self Scan, you can increase your team's efficiency; rather than rostering multiple ushers to individually check tickets and keep points of entry flowing – a single staff member can easily monitor your Self Scan points from a distance, requiring limited supervision. Not only does it free up your staff, but it allows them to keep a safe and healthy distance from moviegoers. Self Scan removes unnecessary points of direct contact as well as the physical exchange of tickets to help keep everyone safe.

*If your cinema layout does not allow for Self Scan to be easily set up, **InTouch** is a good alternative for contactless ticket validation.*

Decide your Self Scan journey

Self Scan can be configured to handle concessions, tickets, or both depending on where your devices are placed. You can also dedicate a device to a specific screen, welcoming moviegoers who booked a seat in that auditorium with a custom message, and redirecting others to the right screen.

With the freedom to set up your Self Scan devices how you like, you have the flexibility to make sure it suits your specific cinema layouts. And by clearly directing your moviegoers where to go, Self Scan helps you keep things flowing!
